

Abstract

A deflecting roller (1) for a traction mechanism drive is characterized in that a guide collar (10.5) of the spacer sleeve (10) is held by the holding bore (5.1) of the inner ring (5), and the guide collar (10.5) has a recess (10.4) in which an elastic holding element (11) is inserted, said elastic holding element (11) bearing against the holding bore (5.1) of the inner ring (5) under preload.
